

# The Aging Implant

In Association with **Dr. Steven Liu**

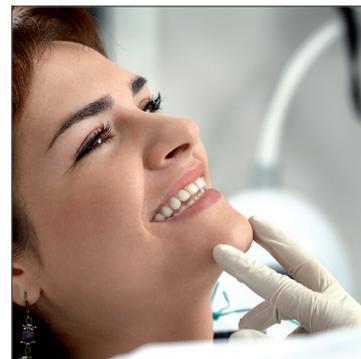

Thursday, October 4, 2018

## PROGRAM DESCRIPTION

The application of dental implant technology is a significant advancement in modern dentistry. Dental implants do however carry with them, some of the same risk factors for disease and even failure as natural teeth do. We have often been guilty of communicating to patients, that they are a permanent solution when sometimes they are not. It is incumbent on all dental professionals to recognize and be able to treat implant issues as they arise, in order to preserve them (as we do with natural teeth) to better serve our patients, which is our ultimate goal.

## LEARNING OBJECTIVES

- Communicating implant success rates and realistic expectations
- Increasing our ability to recognize disease pattern
- Treating implant disease and the steps involved both surgical and non-surgical
- Maintaining implant health through the years
